A young child is smiling and holding up a glowing, multi-colored light stick. The background is a blurred night scene with various colorful lights, suggesting a festival or outdoor event.

Bring your city to life with connected lighting

Outdoor lighting
Philips Lighting
March 2014

An aerial night photograph of a city, likely New York City, showing a dense urban landscape with numerous illuminated buildings and a harbor filled with boats. The sky is a deep blue with some clouds.

What's globally changing in lighting?

The world needs more light
One billion more people
in the world by 2025

What's globally changing in lighting?

The world needs to get smarter
Energy efficient technologies like LED
can unlock significant energy savings

What's globally changing in lighting?

The world is increasingly digital
Digitization is changing the way
people use and interact with light

Challenges for cities

Sustainability

- ... green city
- ... saving energy
- ... reducing carbon footprint
- ... minimizing light pollution
- ... ensuring sustainable public lighting

Economic uncertainty

Bring your city lighting to life with IntelligentCity

For People

Increase safety
... vibrant and beautiful
city ambiance
... local income
... preserving night sky

For Lighting operators

Managing public lighting
... collect and analyze data
... flexible control
... optimize maintenance process

For Municipalities

Creating city identity
... increase livability and safety
... green credentials

Benefits for People

Lighting

- ... transforms cities
- ... creates vibrant spaces
- ... increases traffic and social safety
- ... but consumes 19% of world energy
- ... and makes night skies brighter

IntelligentCity restores the right balance

IntelligentCity improves the livability in your city:

Increase
traffic and
social safety

Well-being

City
beautification

Reduce fear of
crime

IntelligentCity:

Your seamless connected public lighting system to feel more safe, comfortable and proud of your city

Benefits for Operators and Service providers

Massive transformation from conventional to LED

- ... new digital connectivity technologies
- ... new opportunities
- ... optimizing your performance
- ... ease your work
- ... new business models.

IntelligentCity helps you to improve operational performance and reduce cost by:

Effective and simple lighting management

Operational efficiency

Energy management

New business models

Benefits for Municipalities

Smarter lighting

- ... LED technology
- ... credibility opportunities to make cities smarter
- ... safer
- ... sustainable
- ... more livable

IntelligentCity turns public lighting into a smart innovative solution to enhance the image of your city by making it:

Green and sustainable

Safe and attractive for citizens

More optimally city branded

Innovative and future proof

IntelligentCity:

Your seamless connected public lighting system that gives you significant advantages today and develops along with you into the future

A man with grey hair and a beard, wearing a blue plaid shirt, is sitting at a desk in a dimly lit office at night. He is looking at a computer monitor that displays a map with various colored overlays. The desk is cluttered with papers, a keyboard, a glass of pens, and a stack of books. A large window in the background shows a blurred city skyline with lights reflecting on water. The text "Be in control" is overlaid in the center of the image.

Be in control

IntelligentCity: How it works

- IntelligentCity is a connected public lighting solution that connects light points with advanced lighting management software and dedicated services
- Dynamic, intelligent and flexible to any situation
- Detailed, real-time insight into status of lighting assets
- Seamlessly balances city ambiance with sustainability and safety

CityTouch lighting management platform

A complete lighting management solution for entire city workflows...

Cloud based software service

We bring state-of-the-art software into lighting

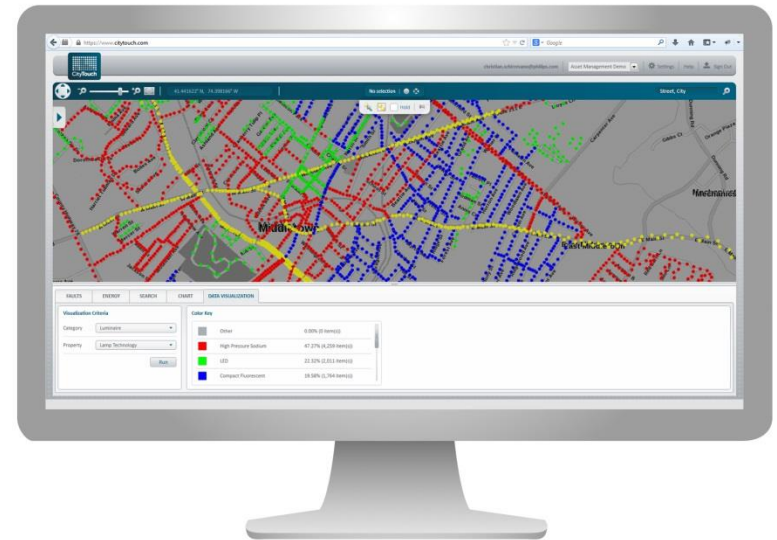

- Easy to use, intuitive workflows, beautiful and modern design

We are the outdoor lighting specialist #1 in the world

- We bring a full end-to-end solution in lighting

We provide the reliability of a global player

- Future-proof, scalable, secure

CityTouch lighting management platform

CityTouch LightPoint

Asset management application to control and manage lighting data and maintenance management

CityTouch LightWave

Remote lighting management to control and monitor public lighting infrastructure

CityTouch LightPoint

Asset management – the power of data

The lighting assets in a city can be complex to manage. They can comprise a mix of installations along with different kinds of luminaires, light sources, poles, etc. all with various lifetimes and failures.

Clear benefits:

Lighting Data Management

- Increased transparency
- Deep insights
- Improved decision making

Lighting Maintenance Management

- Predictive maintenance
- Reactive failure handling
- Continuous monitoring & documentation

CityTouch LightWave

Remote management – the power of control

A flexible service to manage mixed controls hardware solutions, including third party, through one simple user interface. Gives complete control over your city's daily lighting operation, including detailed analysis on system activities, tracking and energy reporting.

Clear benefits:

Remote management

- Flexible adaptation of light levels with a simple click
- Efficient planning through calendars

Energy measurement

- Real energy usage and full history
- Providing tools for measurement & verification

Light monitoring

- Actual lighting status
- Auto-notifications of faults

Intelligent luminaires

Reducing cost in installation, operation and maintenance

READY

Intelligent luminaires are designed for seamless connectivity with CityTouch via the public mobile network. No hassle in commissioning – just plug & play installation of the luminaire and then control and manage it from your desk through CityTouch lighting management platform.

Clear benefits:

Simple installation/operation

- Wide range available
- Easy to order and install
- Plug & Play installation
- Automated commissioning
- Automated location
- Automated asset data import
- No local networks

Connectivity

- Flexible adaptation of light levels
- Easy planning through calendars
- Easy adaption light levels
- Real energy usage & full history
- Providing tools for measurement & verification

Maintenance

- Actual lighting status
- Automated notifications of faults
- All luminaire data available type, drivers, LEDs, etc.
- Reduced spare part control
- Easy warranty

IntelligentCity Services

Supporting services from start to finish

Advisory services

Basic City Audit
TCO / TVO calculations

Project services

Asset data import
Asset data collection
System integration

Lifecycle services

Extended Warranty
Maintenance packages
Energy Performance
Reporting & Consulting

Clear benefits:

Pre phase

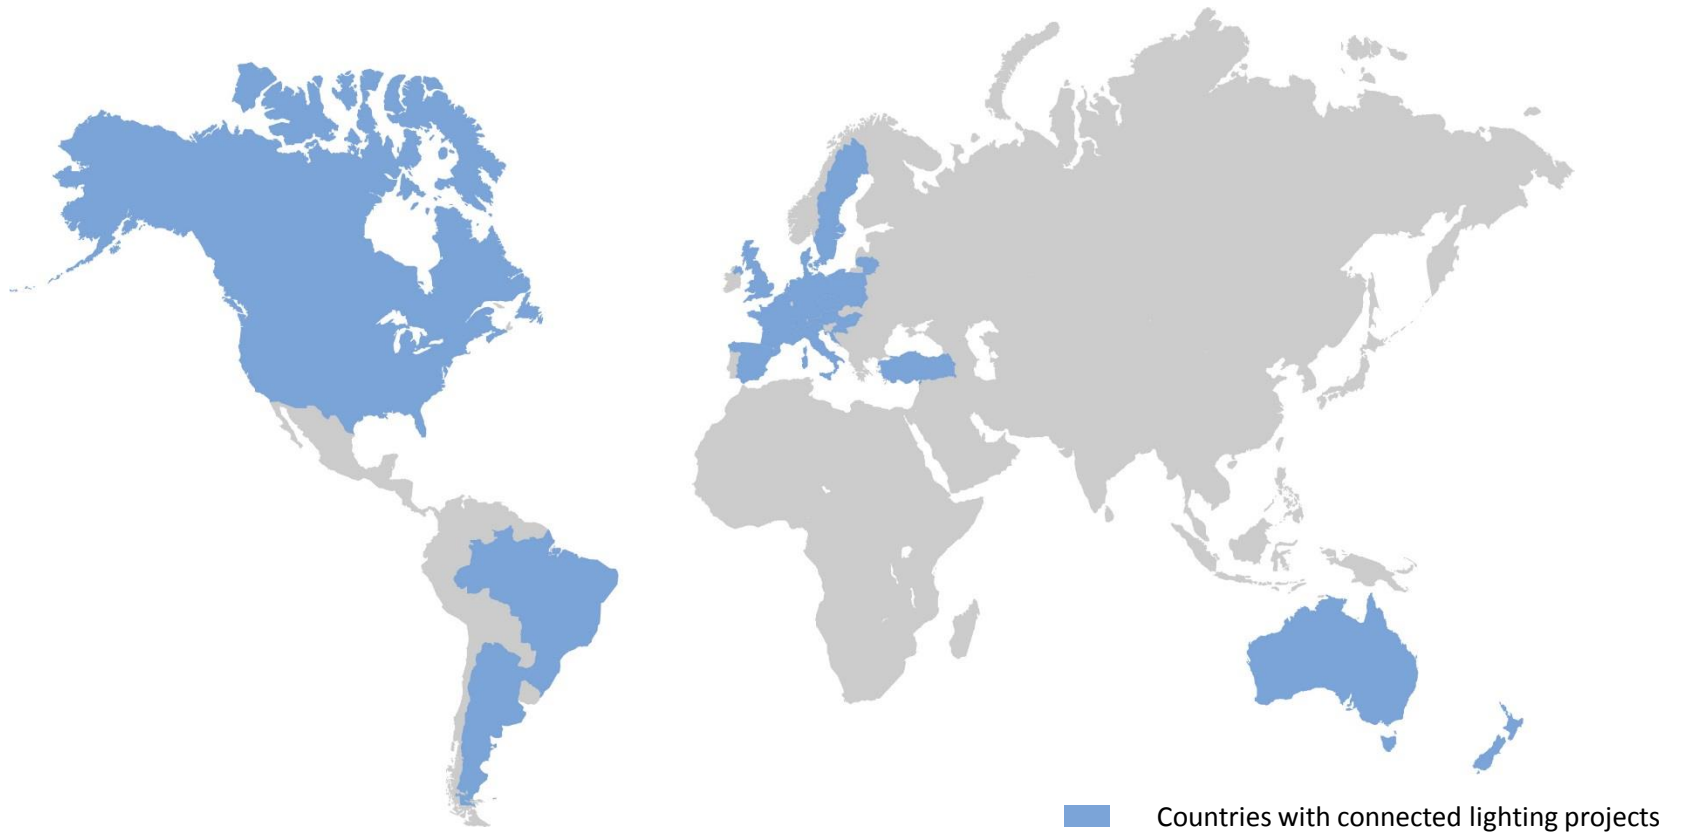

- Fast & underpinned decision process
- Expert analysis of lighting installations

Project and Lifecycle

- Investment protection
- Peace of mind
- Efficient execution and delivery
- Reliable expert partners over full lifetime
- All technologies and services under one roof
